DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH IT'S LABELING.

For optimum performance in overhead treatments, align the actuator opening with the mark on valve cup. When treating in a downward direction, align the actuator opening directly opposite the mark on valve cup.

Spray Downwards Spray Upwards

WASPS AND HORNETS: Hold container in upright position to treat. Stand safe distance, 6-15 feet from nest and not directly underneath. Align actuator opening with the mark on valve cup. Aim actuator opening toward nest. Treat nest until thoroughly wet. Wasps and hornets on nest should be contacted with spray when possible. Best time of day to treat is in evening or early morning, since wasps and hornets congregate on or in nest at night. Do not apply to pets or contaminate food, food-stuffs, dishes or utensils. For outdoor use only.

To prevent dying insects from falling on skin and clothing, avoid standing directly under nest being treated.

YELLOWJACKETS AND BEES: Locate underground nest. Align actuator opening directly opposite the mark on valve cup. Depress actuator and treat, with a sweeping motion, any stimulated or stirred-up insects around nest opening. Afterwards, move forward to nest opening and apply liquid for 6 to 8 seconds directly into nest hole. This will suffocate bees and yellowjackets in nest;

other bees and yellowjackets trying to return to nest will be repelled and will fly around and away harmlessly.

SPIDERS, INCLUDING BLACK WIDOW AND BROWN RECLUSE: Apply spray directly onto spiders and web.
